---

Dear Mr. Kim,

I regret the delay in responding to your subject Office Communication. Your communication arrived in Dallas during the Post Office's transition time period in which it takes to forward mail to my above new residential address. I received your letter on July 1, 2005. At this time, my wife and I were still unloading U-Haul boxes and trying to get our household goods put away... plus getting my office established again. After being married 41 years, it is amazing how many household items that a family accumulates.

Since the March 18, 2003 publication of your examined 6,532,745 Partially-open Gas Turbine Cycle, I have received the April 12, 2005 published 6,878,186 Pure Vacuum Swing Adsorption System and Apparatus patent. This patent reduces the electric power consumption per ton of oxygen by approximately 75% over previous best efficiency air separation systems, thereby providing the means of making the 6,532,745 turbine cycle's oxy-fuel combustion operating system exceptionally economical in operation.

I am respectfully requesting that you defer any further examination of the present 10/743-505 submitted application until I am able to respond with a correctly formatted and re-submitted Claims for the 10/743-505 application. I trust that with your present application review work load, that this will not create any convenience to your work schedule. Your favorable acceptance of my request will be most appreciated.

Regards,

*David L. Neary*
